

Decentralized Finance (DeFi)

gitcoin grants rd 12, 2021.

The Tezosphere Marketplace

- A DECENTRALIZED ADAPTABLE PLATFORM
- INTERACTIVE, RPG/SIMULATION

The gamification of De-Fi resources will teach users how to traverse the coming renewal of modern financial systems.

Highlighting the benefits of web3 will influence individuals towards the security and anonymity provided by web3. The Tezosphere provides an open source platform locked into the Tezos blockchain. The blockchain's intelligent design provides a solid base for a new type of gaming. Game financial systems or Game-Fi create a decentralized community of asset exchange. As more people interact with the platform, more value is added.

The marketplace would have three key features:

1. An in-platform for to teach individuals about decentralized financial systems.
2. An in-game decentralized exchange for game-exclusive collectibles and web3 digital assets.
3. Building community a governed generative marketplace

The purpose would be to provide a play-to-earn platform that teaches the benefits of DeFi products, decentralization, and concepts associated with web3. By removing technical jargon and "real life assets" initially, users will be more inclined to play. Once a user becomes familiar with the DeFi and web3 they will likely start participating in the DeFi ecosystem adding to self-reliant financial communities.

**CAN A GAME BE A
PLATFORM TO TEACH
INDIVIDUALS HOW TO
USE DE-FI SERVICES?**

**IS IT ABLE TO
COMMUNICATE THE
POTENTIAL FOR
FINANCIAL GAIN?**
