

Tezos - NFT Bounty
Gitcoin 2021

What Can An NFT Represent

o o o o

What about
community, and
work within the
cybersphere?

Currently the internet is evolving faster than anyone could have predicted. A positive outcome from this evolution is seen within the gaming and creative industries.

The TezosToken – a gamification of Tezos POAPs and NFTS.

What is this hypothetical TezosToken? This token is a NFT art piece, or collectible which are deployed into a RPG video game or computer game. This game could then lead to a marketplace and more (check out my Tezos Metaverse Submission).

For the purpose of this project, I will focus only on the token itself.

What can a
TezosToken
do?

TezosTokenz

1

A Tezos POAP can be used for verifying SSI.

2

NFT and gaming community surrounding the Tezos Blockchain.

3

Has the potential for Game-Fi where users can bake and sell NFTS within the game.

TezosTokenz

○ ○ ○ ○

What is the TezosToken?

A Tezotoken is a POAP

- A POAP is a digital collectible created as a NFT (non-fungible token) powered by the blockchain.
- a POAP is a new standard of verification; a proof-of-attendance protocol – a badge attendees receive to prove their attendance at an event.

POAPS' are baked using the Tezos blockchain digitally storing the information forever in the chain while awarding the player with an digital asset. Collecting POAPs seems likely when reviewing consumer trends and the explosion of jpeg NFT art. presently making would also be an aspect of the game.

Player created tokens could be sold throughout the game using their own assets to give some sort of benefit within the game itself. This could possibly evolve into its own market within the game using only TezosTokenz (NFTs & POAPs) value would depend on how the game economics work. can be sold between players.

The Possibilities

1 TezosTokenz

2 The Evolving
Tezos Blockchain

The game itself should be an RPG : allowing for user interaction.

This game would be creating a new universe, a community of individuals who want to play and support each other.

This idea has the ability to grow into and evolve with the Tezos blockchain, as well it game itself leave room for different abstract ideas. These ideas and the game universe should be given and decided by the community.

What universe would you like your metahouse to be in?

POAP

- The token can be used as a proof-of-attendance protocol obtained only from within the game.
- POAPs can be used beneficially for a players SSI,

NFT

- In this game, players could create digital assets using materials found in the game or make assets for the game. Players could then choose to use their made items, or they could sell them.
- This game would exist on the Tezos blockchain.

SSI

- Self-Sovereign Identity is a new, but very important concept within the cybersphere.
- SSI Credentials are tamper-proof.
- Encrypted POAPs can be used as a credential within an SSI.

MARKET

- Within the game, players will need a market place where they are able to bake, sell, trade and buy game assets.
- The currency could use XTZ or a new token exclusive to the game. If the latter, then the market place should accept all forms of cryptocurrency.

In Summary

An RPG game built on the Tezos blockchain.

Establishing a community of people to play, create and interact.

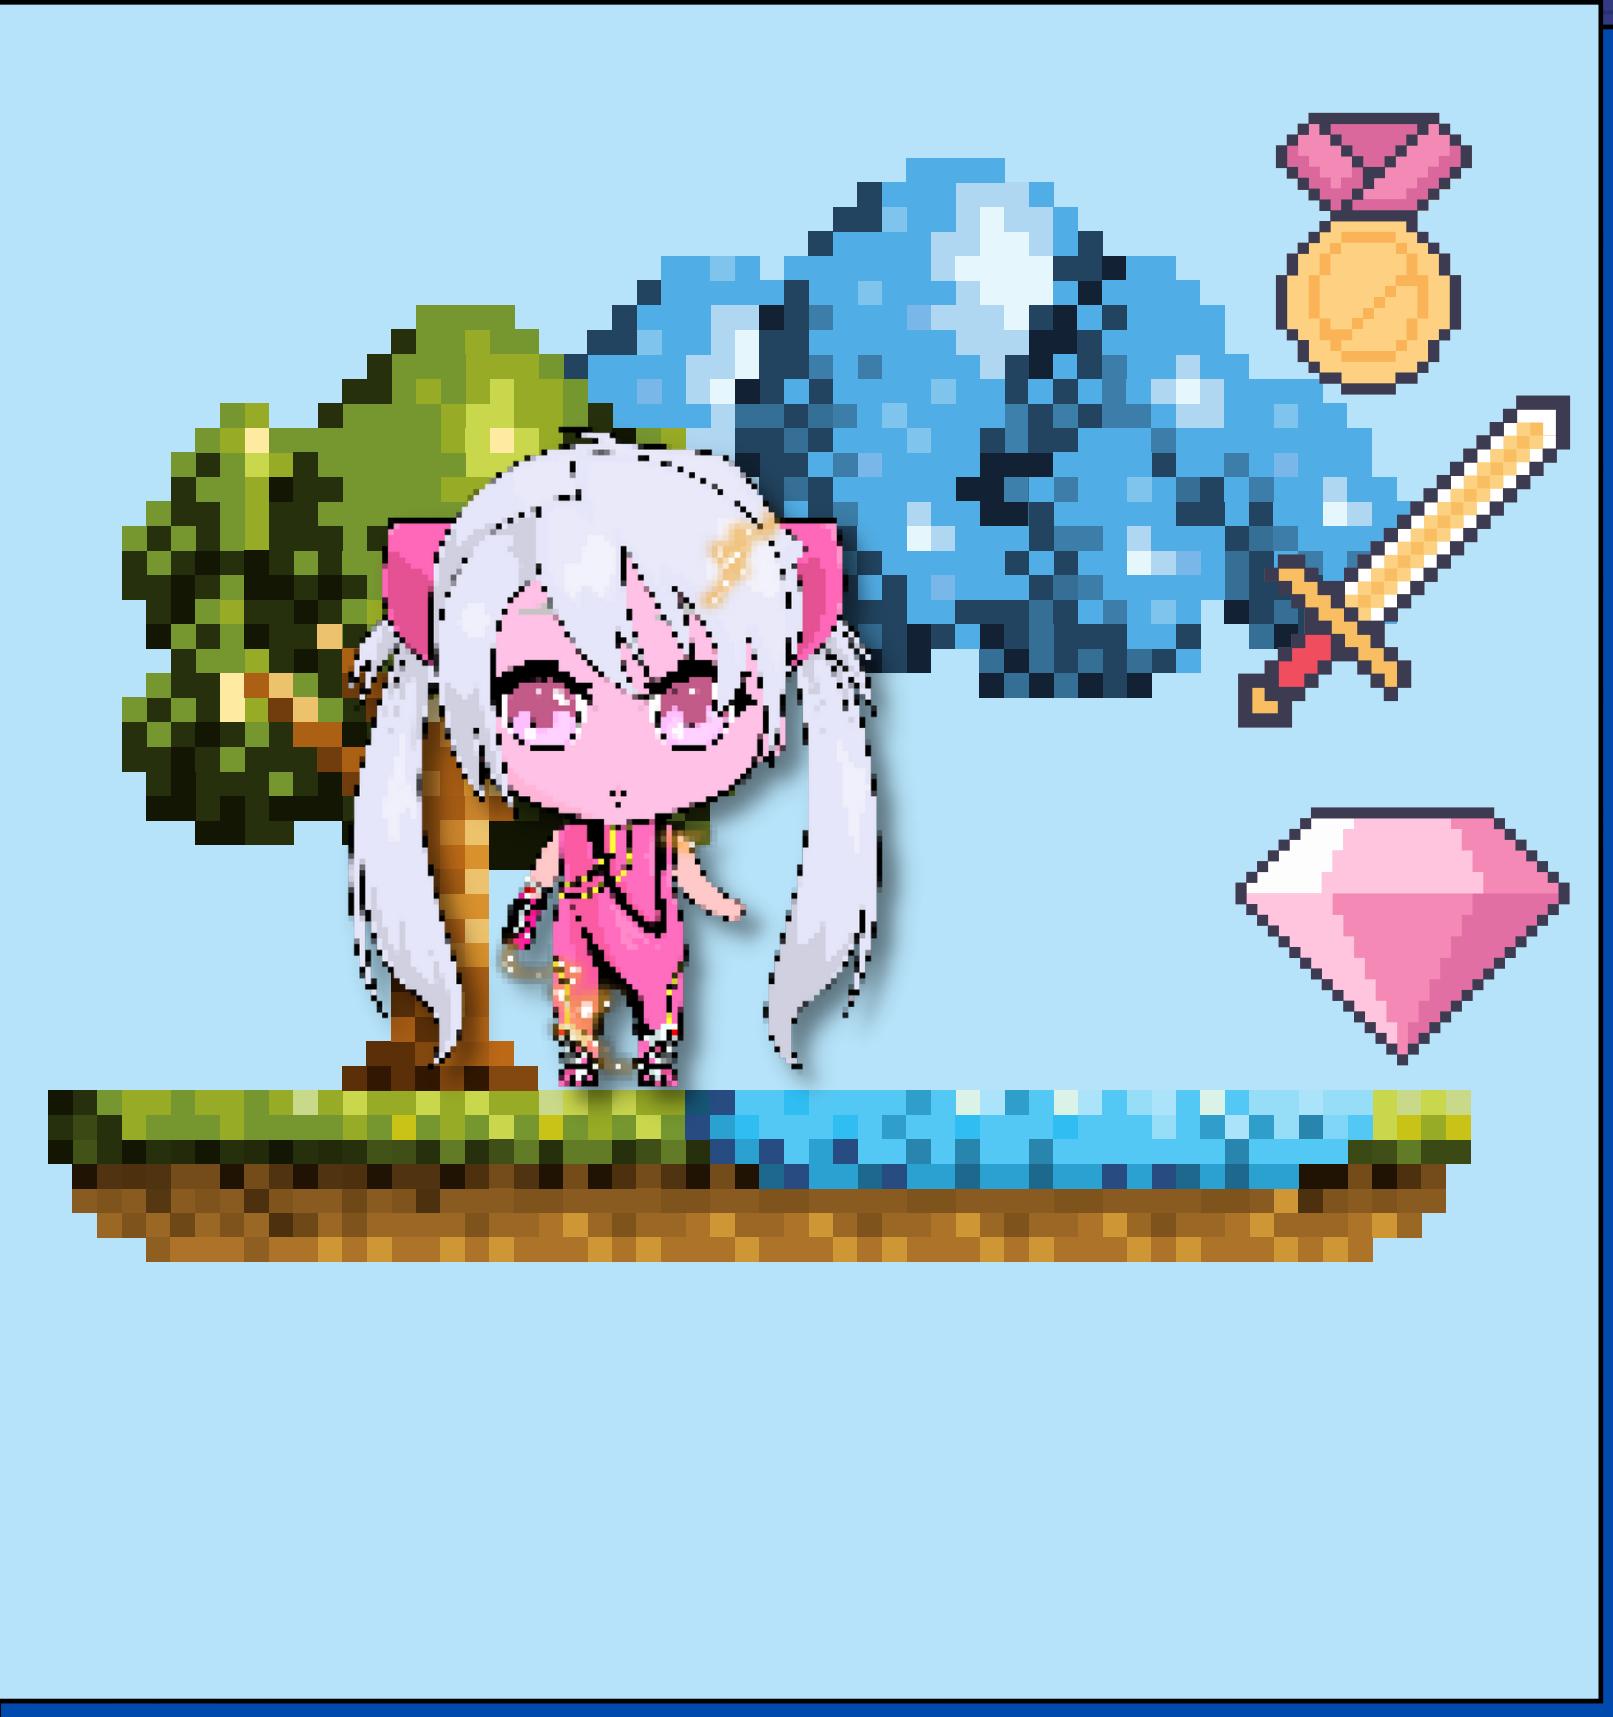

People will play to obtain **POAPs**, and the varying difficulty levels will drive player to collect them and attempt finding the tokens labelled "difficult". The social aspect of the game leans to the development of the marketplace. As users make items for the game they will have the option to either keep their item and use it or they can place it for sale on the marketplace. The digital asset's (**NFT**) value is determined by the player and the market. As more people come to the game to play or to sell the price of tokens will fluctuate with the market.

Creating a new type of gaming economics exclusive to the Tezos Blockchain.

Game Aesthetic

A little mock up of a user token and their NFT

I think the pixelated look is not going anywhere. I think it would be cool to see a pixelated game within a cyberverse. The characters would be high-resolution pixel citizens.

THANK YOU

By: Justina Valderrama

Stay tuned for my
metaverse idea!
