Presentation abstract

TezosToken

What is a TezosToken?
A TezoToken is adaptable to many digital assets such as:

1. POAPs
2. NFT Asset
3. SSI Verification
4. Governance

This presentation will focus on the token being used for POAPs (proof-of-attendance protocol).
These POAPs are baked using the Tezos blockchain digitally storing the information forever in the chain while awarding the player with a digital asset.
POAPs collecting is likely to explode soon, based on consumer trends reviews and the now widespread phenomena of jpeg NFT art. which would also be an aspect of the game.

Difficulty of finding a POAP could vary, for example:

person xyz discovered POAP **3/5**.

person abc discovered POAP **5/5**.

person abc has the more valuable POAP

The value is directly correlated to the difficulty and rarity assigned to the POAP.

Player-created tokens can be sold throughout the platform using their own assets giving the token value & benefit to the game's own economics.

- Possibly evolving into its own market within the game using only TezosTokenz/Sphereos.
- Alternatively create a marketplace with multi-chain capabilities (ideal for a wider audience grasp).
- A combination of both ecosystems.

As more people come to the platform, the price of tokens and assets will fluctuate within, and in-response to, user-generated decentralized financial ecosystems.

TezosToken

**TEZOS: A DECENTRALIZED, OPEN-SOURCE
PROOF OF STAKE BLOCKCHAIN NETWORK**

Non-Fungible
Tokens (NFTs)
